-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 1745

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 5 is rejected under 35 U.S.C. 102(b) as being anticipated by Meltser *et al.* (US 5,763,113).

Meltser *et al.* disclose a fuel cell stack (2), which would be a module, which includes a hydrogen gas sensor (32), having an output line (34), which would correspond to the present “detecting portion”. Since these are mounted within a fuel cell manifold (30), they would be “integrally assembled” therewith.

Claim 6 is rejected under 35 U.S.C. 102(b) as being anticipated by Tomioka *et al.* (US 5,853,910).

Tomioka *et al.* disclose a fuel cell (10) which includes a temperature detector (22) mounted therein, and thus “integrally assembled” therewith. In figure 1, a dashed line and arrow leading from the temperature detector indicate an output line, which would correspond to the present “detecting portion”.

Claims 1, 3, 4 and 7-9 are allowed. The prior art, either of record or applied above, does not disclose a fuel cell (presently called a “fuel battery”) having either a flexible print circuit with gaskets on either side thereof, a detecting portion for voltage or current being electrically

Art Unit: 1745

connected to at least one of a pair of separators, or a signal line and a gasket both being integrally formed with a single substrate.

Applicant's arguments with respect to claims 5 and 6 have been considered but are moot in view of the new ground(s) of rejection. These claims as amended recite a fuel battery, a sensor and a detecting portion, but no longer recite any gasket.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
